

Product Designer

Reference:	PROD-DESI-MKPL-2021
Starting Date:	January 2021
Employment Type:	Full-Time, from Monday to Friday (remote work)
Seniority Level:	3-5 years of experience

About TrackInsight

TrackInsight™ is the world's first Exchange-Traded Funds analysis platform. We serve the global ETF investment community by providing daily data and in-depth analytics on over 6,200 ETFs listed worldwide, alongside powerful ETF screening and selection tools and independent insights into the global ETF market. In addition to the core platform, TrackInsight also builds and manages satellite platforms, like the Financial Times' ETF Hub.

In 2021, we plan to redesign our core platform, as well as extend our external reach.

About the Job

At TrackInsight we're all about building products and services that best fit what our users are trying to do.

As a product designer, you are fundamental in helping people to make that progress. With millions of daily, multi-dimensional data-points, there is a lot of complexity in our platforms, but we strive to keep our user-facing tools simple and friendly, allowing our users to become better-informed investors.

Sounds like a fun challenge? Read on.

You will be working on shaped projects in 6-8 weeks cycles. Those projects can concern the core platform and its tools, but also editorial interfaces, themed and data-driven microsites, and external satellite platforms. You will report directly to the product VP and work in close collaboration with both the latter and the team of front-end developers.

What you need to succeed

Ideally, you:

- Have great taste and sensibility for large visual hierarchy
- Have a strong typographic foundation
- Are precise and detail oriented in both your designs as in hand-of
- Like building tools
- Are able to see things through the user's eyes
- Are able to write great interface copy
- Are fluent in English
- Have a sensibility for data visualisation and tools for exploring data
- Are able to clearly and early communicate your ideas, be it in words, sketches, prototypes, whatever gets the job done
- Are self-directed but don't skimp on asking for help if there are unknowns
- Are a great communicator and collaborator
- Have experience with Sketch (but we're open to other tools)
- Have experience building and using design systems
- Have good html/css skills, as well as responsive design principles.

TrackInsight's office are located in Sophia Antipolis, but most of our people work remotely, including 90% of the product team. This means that by default, this is a remote position. The only thing we ask is that you have at least 4 hours overlap with CET. It's a plus if you can meet with our product VP in Paris every now and then for in-person collaboration.

In principle, the position is full-time on a hired basis, but we are open to discuss alternatives. Salary is market-rate plus benefits.

The position is set to start in December 2020.

How to apply

Please write us a cover letter in which you explain us why this job is made for you. Tell us about how you work, what you've done (what worked or didn't work), what excites you.

Your CV, a portfolio, detailed examples of work, all is game. We're less impressed by flashy big-brand work than by complex projects that show your smarts.

We're looking forward to your email at careers@trackinsight.com
