

## **1,500+ North America & Europe domiciled ETFs now rated on their replication quality**

TrackInsight ([www.trackinsight.com](http://www.trackinsight.com)), the independent global ETF data & analytics platform, is delighted to announce the release of 2017 Summer ETF ratings. **881 Europe-listed & 621 North America-listed ETFs** now benefit from a fully independent rating, enabling investors to easily assess the replication quality of ETFs based on a three-year track record. These 1,502 rated ETFs, covering all asset classes and the most sought-after benchmarks, have over **€2.5T in AUMs** as of 30 June 2017.

Amongst them, **378 have been awarded 3 to 5 stars**, a testimony to their superior performance vs peers both in terms of tracking difference and tracking error. Such high-quality ETFs - accounting for 55%+ of global ETF AUMs - make up the “TrackInsight A-list”, which is now considered as the industry benchmark for passive funds by large institutional investors.

TrackInsight independent ratings are based on a systematic quantitative analysis of at least three years of track record and shed light on the ETFs offering the best in class replication of their respective index. Our methodology is available on [www.trackinsight.com](http://www.trackinsight.com).

Ratings can be found using the free search bar, analysis, comparison and monitoring tools of our TrackInsight platform. In total, we provide a full transparency on 3,600+ funds.

### **About TrackInsight**

TrackInsight is the first platform for rating and selecting exchange traded funds (ETFs). Based on controlled and certified data, TrackInsight offers its users total transparency on the primary quality demanded to ETFs, the faithfulness with which they replicate their underlying benchmarks. The platform launched in October 2014 is now used by more than 6,500 investment professionals acting on their own behalf or for third parties.
